Registration No: 25BCE11117
Branch: CSE Core
Year: First Year
Course Code: CSE0001 - Digital Literacy
Date: March 31, 2026

VIT Bhopal University

1. Introduction

As an incoming Student Digital Ambassador of VIT Bhopal, my primary goal is to help peers navigate the evolving digital world. This includes educating them on building a professional online brand, maintaining safety while communicating digitally and being responsible with their digital activity. This project acts as a complete Digital Literacy Portfolio that correlates five core curriculum modules to actual deliverables from real-life applications.

This project will provide a professional foundation to be shared with my academic committee and with my group. By using online tools with an accessible browser, I have been able to demonstrate that with minimal to no coding experience, any student can achieve digital literacy.

2. Task 1 - Digital Literacy Awareness Infographic

As my first task, I created a visual awareness tool designed to educate my classmates about the importance of digital literacy .

2.1 Creating the Infographic

To create the infographic I used Canva to create a visually impactful (1 page) infographic. This infographic utilizes visuals to address three main areas; guidelines for safe use of the internet, essential digital tools for students and having a professional presence on the internet.

2.2 Reflection

Designing an object has helped me gather all of the pieces required to create a final product from the research. Another thing that was fascinating for me was discovering how visual hierarchy can be used to lead someone’s eye to “Safe Internet Practices” first. The most challenging part of this experience was keeping a clean aesthetic while also conveying a clear message. This experience will be useful in my academic and technical poster presentations in the future.

3. Task 2: Creating a Portfolio as a Student

Today, if you're an engineering student, you need a digital identity.

3.1 Creating Professional Profiles

I have developed and maintained professional profiles on GitHub, LinkedIn, and HackerRank. On my GitHub profile I created a Profile README file that includes my branch and current year. It has one goal: to learn cloud-native development. My LinkedIn profile reflects my current degree completion with VIT Bhopal and what date I expect to graduate.

3.2 Future Use of My Professional Profiles

Each of these platforms serves different functions in my career development. I will primarily be using my LinkedIn profile to network and find summer internships, while GitHub will primarily serve as a collection of versioned code for my school's assignments and my own projects. In addition, during my next four years at university, I intend to make contributions to open-source projects so that I can develop an established history of technical competence.

4. Task 3: Coding and Collaboration Tools

This task identifies the tools needed for learning, improving, and collaborating amongst members of a technical community.

4.1 Practice Programming

To demonstrate that I have basic programming ability, I did a “Python Introduction" exercise on HackerRank as one way to see how I am doing against global benchmarks.

4.2 Work Together in the Cloud

As an example of how I am using Google Forms, I created an “Digital Literacy Awareness
Quiz" with five questions that included multiple choice and short answer questions. Additionally, I used Google Sheets to help me track who took the quizzes and what their answers were. I am currently working as a Digital Ambassador, so this will help me collect real-time reactions to my peers and organize my academic survey data
Quickly

5. Task 4: Professional Email and Etiquette

The basis for digital literacy is professional communication. This particular task aimed to help me apply the rules of etiquette to formal communications with a

professor requesting an extension and an internship coordinator regarding summer internship opportunities.

5.1 Email Scenarios

I chose two emails to write, one to a professor requesting an extension on an assignment, and the other to an internship coordinator expressing interest in a summer internship. Both emails had a clearly stated subject line, formal greeting, and formal closing.

5.2 Communication Reflection

I analyzed an instance in which digital communication had a negative effect on the real world. For example, many students lose out on internships due to the way their initial email to an internship coordinator was written. This task has reinforced that clarity and structure are more important than length in a professional piece of writing. I also developed a "Social Media Do's and Don'ts" list as a guideline for my peers to assist them in maintaining a clean digital footprint.

6. Task 5: Cybercrime Awareness and Prevention

When you're an ambassador, you need to help your friends figure out how to recognize and avoid threats online.

6.1 Case Study: phishing "bank security alert":

In this example, a student receives an urgent email stating that their bank account has been locked and it needs to be "unlocked" by clicking on a link.

1. The attacker has made the email look like it is from their bank.
2. The email says that they need to "unlock" their account right away.
3. By clicking on the link in the email, they will take them to a fake bank login page. This page will ask you for your username, password, and one-time password (OTP).

6.2 Prevention and Personal Habit:

Since I have learned how sophisticated phishing attempts can be, I now always use a bank app and I never enter my PIN or username and password by clicking on links. I also made a bookmark of the National Cyber Crime Portal (http://cybercrime.gov.in) and the 1930 Helpline.

7. Conclusion

The Digital Literacy project (CSE0001) has created a roadmap to being a successful Student Digital Ambassador. I have developed a professional digital portfolio and acquired the necessary skills to support my fellow students with navigating through digital academia by completing these 5 modules of the project. The various skills, such as managing a GitHub repository, or writing professional emails, that I have learned will be great assets to my 4-year educational experience at VIT Bhopal and my future career in technology.
